PERNA LANE AREA SANITARY SEWER PROJECT

The Stamford Water Pollution Control Authority (SWPCA), an agency of the City of Stamford, will present proposed alternatives for the **PERNA LANE AREA SANITARY SEWER PROJECT**, in an informational meeting on:

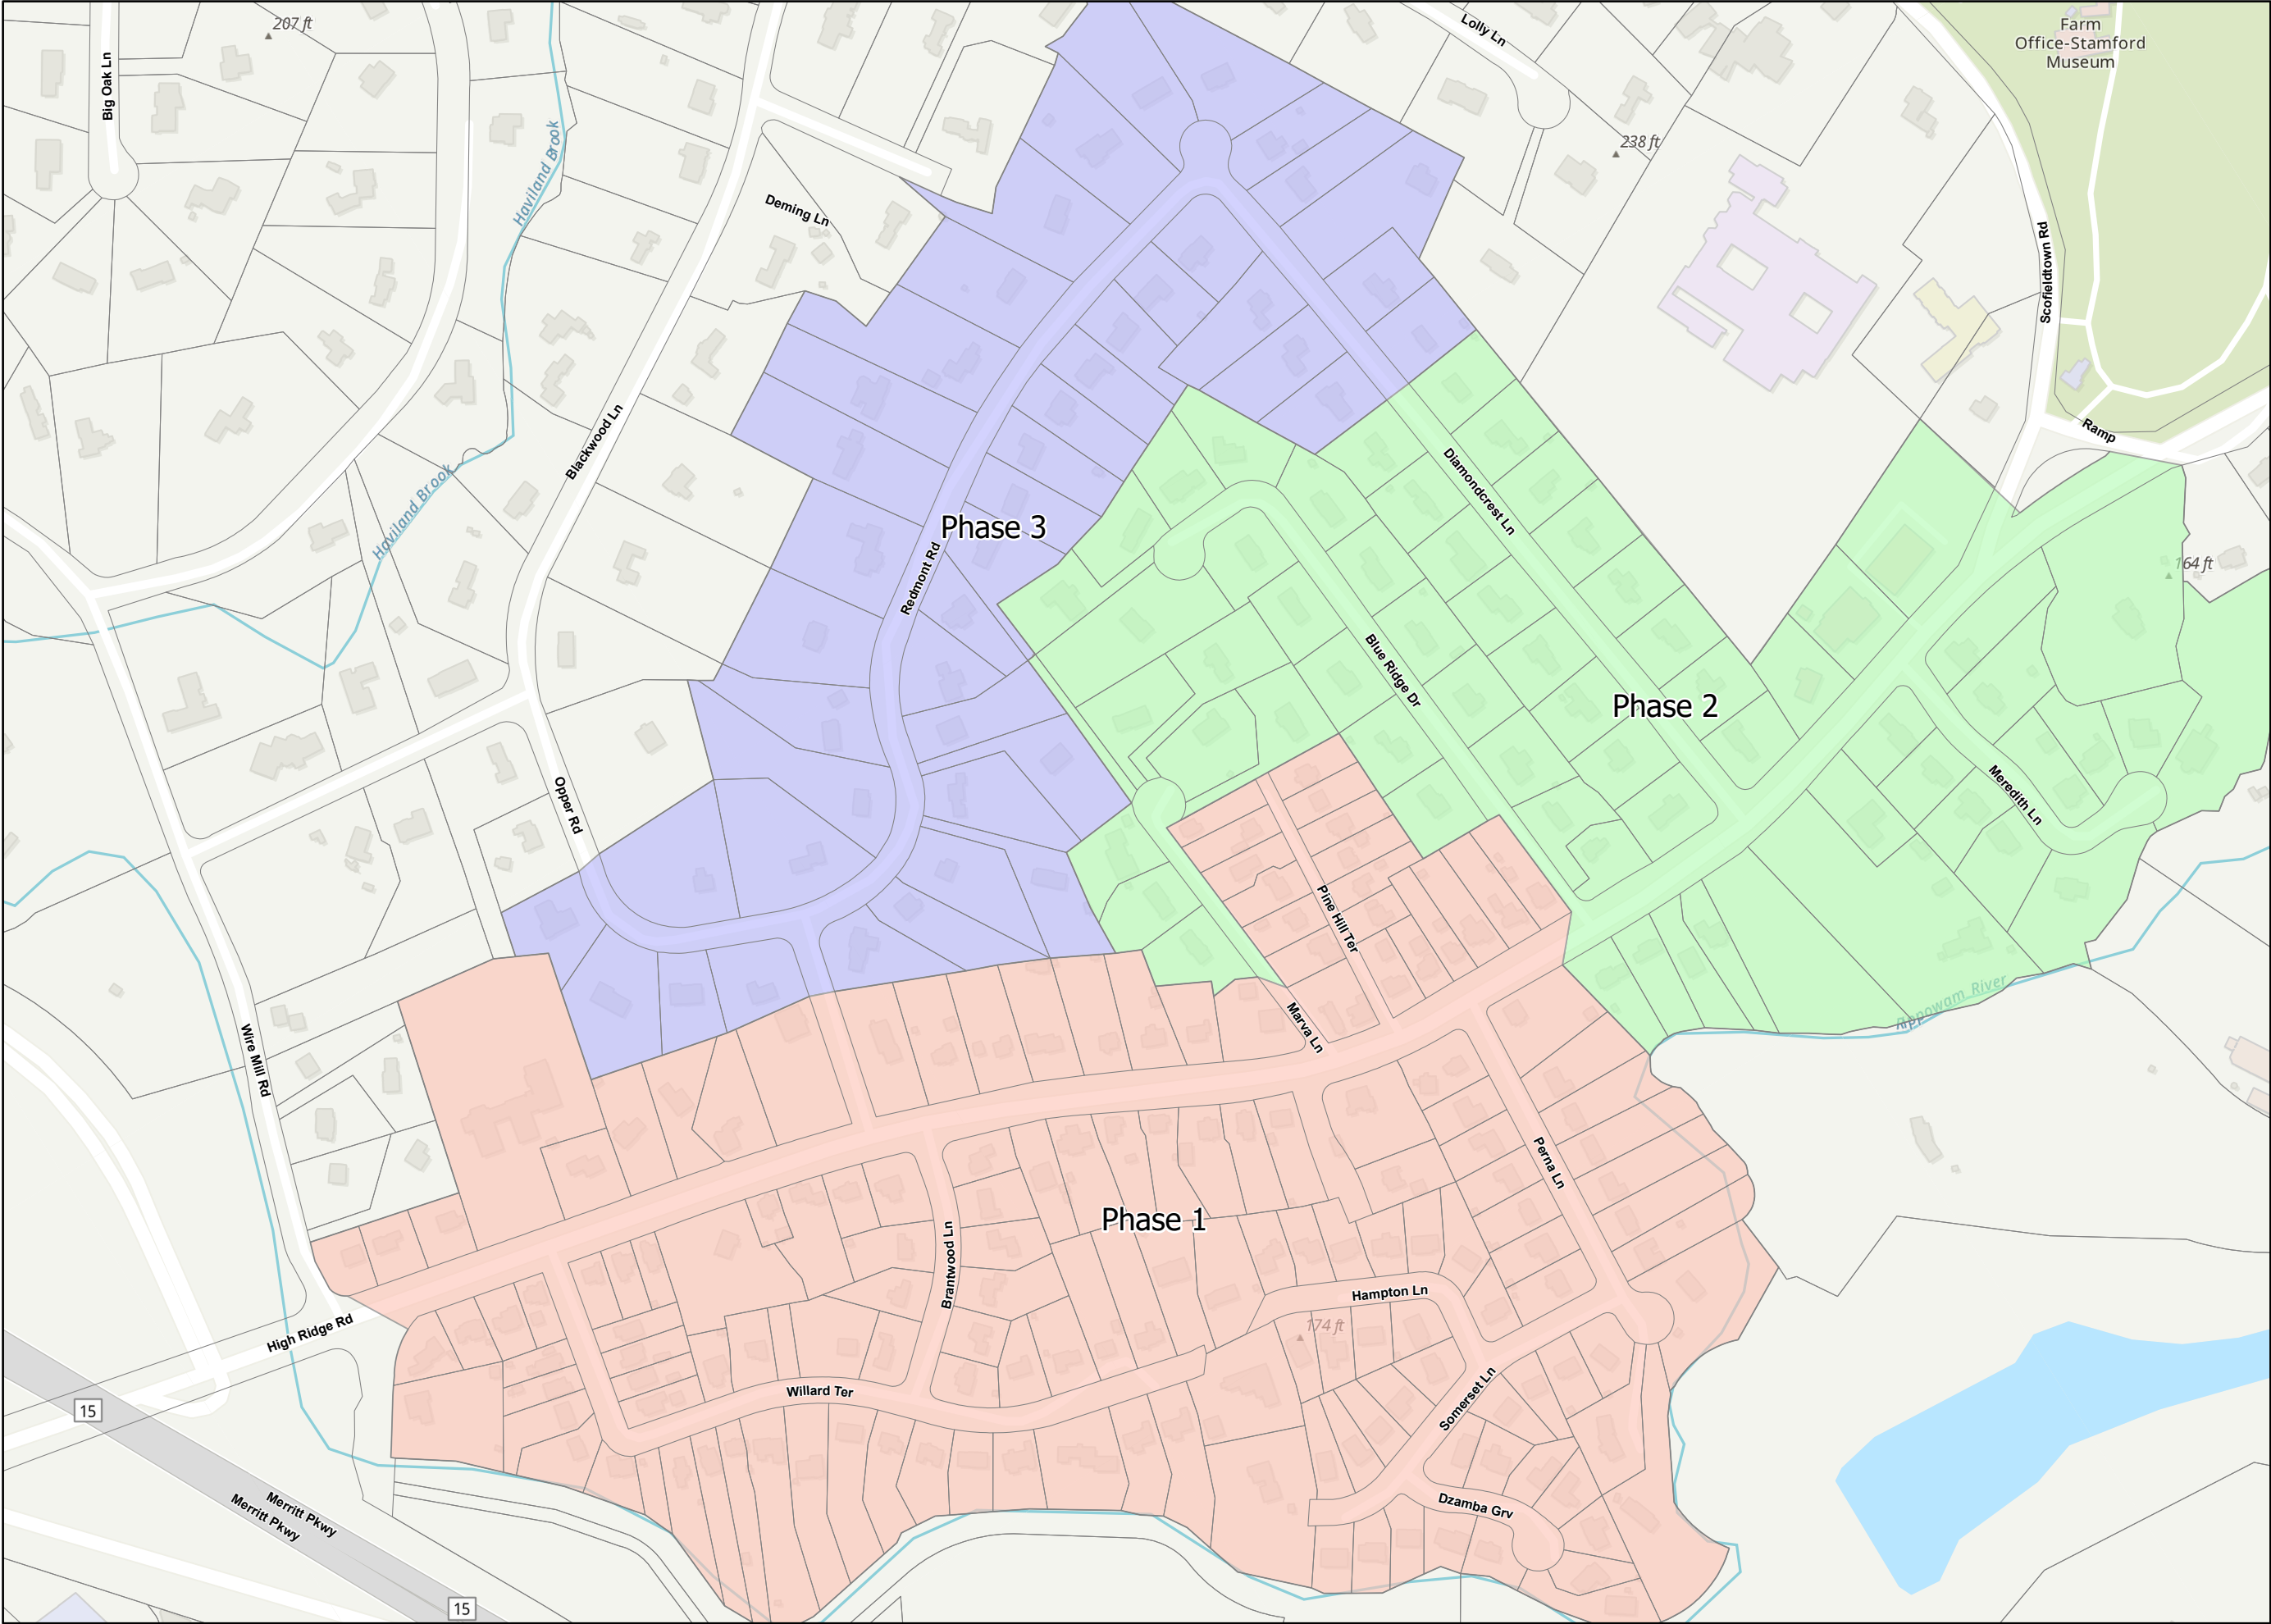

**Wednesday, December 11, 2019 at 7:30 pm at
Stamford Church of Christ, 1264 High Ridge Road
Stamford, CT 06903**

Evaluation of alternatives for Perna Lane Area Sanitary Sewer Project was performed by Tighe & Bond Engineers after the previous bids received for construction of gravity sewers (only) for Phase I were cost prohibitive. The study evaluated alternatives for constructing the three (3) phases shown on the area map attached, consisting of various combinations of gravity sewers with one (1) or more pumping stations, and low pressure sewers with individual grinder pumps. The feasible alternates and estimated costs for the construction of sanitary sewers to serve properties in the Perna Lane area will be presented at this meeting.

Tighe & Bond Engineers and SWPCA staff will be available at the informational meeting to answer questions and address any specific issues you may have. Copies of the presentation materials will be available on the City's web site at <https://www.stamfordct.gov/water-pollution-control-authority-board>

If you have any questions or comments please contact Ann Brown, P.E., Supervising Engineer, at (203) 977-5896 or abrown2@stamfordct.gov

Thank you, in advance, for your cooperation and patience.
