## COVID Alert CT: What it does

- Find out if you've been near someone who tested positive
- Anonymously report if you test positive
- Your information will be protected, and your location will never be tracked

### Basic information

- How the State is doing.
- iPhone v. Android.
- Languages.
- Privacy and your information.
- Other states.
- Where to find information: ct.gov/covidalertct

### The Process

You spend more than 15 minutes within 6 feet of someone within a 24 hours period. You both have the app, and your phones exchange anonymous tokens via Bluetooth.

That person tests positive for COVID-19.

After that person receives their test result, they're contacted by a contact tracer, and the contact tracer gives them a verification code to enter into the app.

Once they enter the code, you will get a notification that says you may have been exposed to someone with COVID-19, and you should contact a Connecticut contact tracer.

The contact tracer will give you information about testing, self isolation and quarantine, and state resources available to you.

If you test positive, you will receive a verification code from a contact tracer, and your contacts will also receive notifications.

The app works most effectively when more people have it on their phones

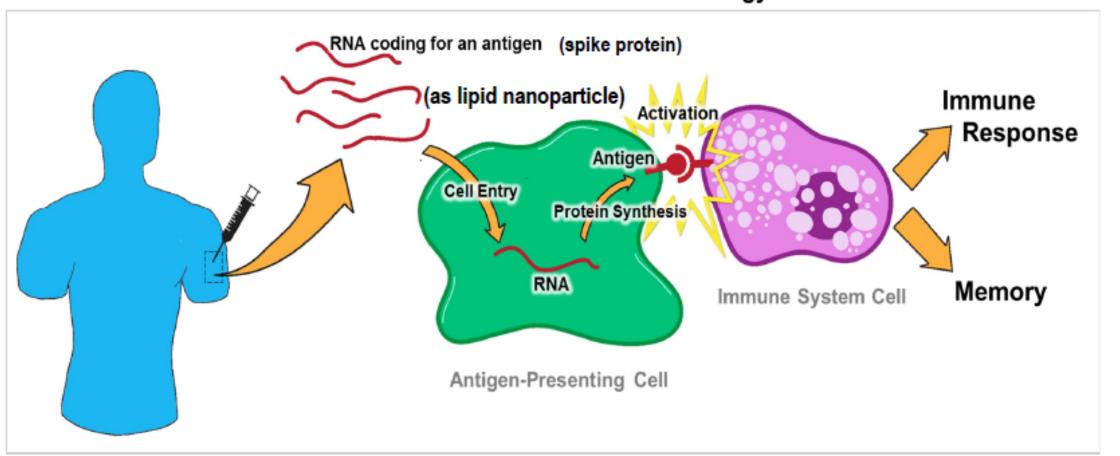

## Vaccine Update

#### How do SARS CoV-2 mRNA vaccines work?

#### RNA Vaccine Technology

### Pfizer vaccine – phase 3 trial results NEJM 12/10/20

#### Trial began on 7/27/20 and enrolled 43,548 adults

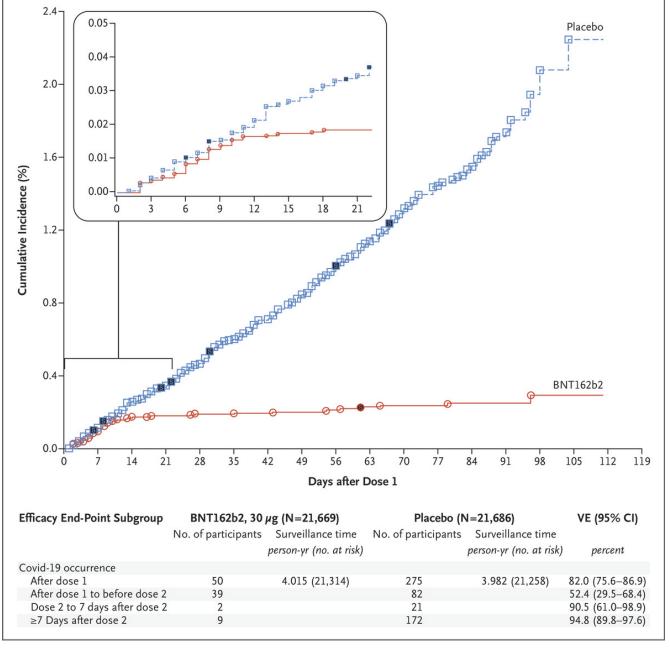

- 37% were "racially and ethnically diverse" backgrounds
- 49% were female
- 42% of patients older than 55 year of age
- 35% had BMI over 30 and 21% had at least one other coexisting condition

#### Primary analysis -- 95% efficacy against COVID-19

- 162 COVID-19 cases in the placebo group versus 8 in the vaccine group
- Efficacy in adults over 65 years of age was 94%
- Efficacy was consistent across age, gender, race and ethnicity
- 9 cases of severe COVID-19 were observed in the placebo group and 1 in the vaccine group

Vaccine was well tolerated across all populations

### Efficacy of the Vaccine

### Safety data

- No evident serious safety signals in the trials
- High prevalence of mild flu-like symptoms
  - High frequency of arm pain, fatigue, headache and myalgias
  - Grade 3 adverse reactions: fatigue in 3.8% and headache in 2.0%.
- New suggestion of possible anaphylaxis in those with severe allergy history to prior injectable medication or vaccine
  - Lipid nanoparticle reaction?
- Importance of staggering the schedules of staff within departments
- Prospective safety assessment planned:
  - VAERS online system
  - V-SAFE, new CDC smartphone AP for patients after-vaccination health check and reporting
  - Vaccine Safety Datalink (VSD) collaboration between CDC and several HCOs to conduct ongoing safety monitoring in large populations
  - Phase 4 randomized trials problematic

#### Still Unknown...

- How long will the vaccine immunity last?
- Will there be a need for annual revaccination like the flu vaccine?
- Still insufficient data on:
  - The effect of the vaccine in pregnant women
  - The effect of the vaccine in breastfeeding women
  - Pediatric use
  - The Pfizer vaccine interaction with other COVID-19 vaccines
  - Ability to administer the vaccine simultaneously with other routine vaccines
  - Use of the Pfizer vaccine in persons who received monoclonal antibodies or convalescent plasma.

# State of the City: COVID19 Stamford Department of Health

- Pfizer received Emergency Use Authorization (EUA) approval
  - Pfizer vaccine is now shipping in Connecticut
- Moderna expected to receive EUA approval this week
- NONE ARE LIVE VIRUS VACCINES
- TWO (2) DOSES of the SAME VACCINE are needed THREE (3) WEEKS APART
- Persons who were previously infected with COVID-19 or had COVID-19 disease may be vaccinated
- Persons who are in the community who are on quarantine or currently infected should wait until the isolation or quarantine period is over to get vaccinated
- Vaccines are FREE to everyone

# State of the City: COVID19 Stamford Department of Health

#### **Vaccine Distribution:**

- Phase 1A HAS STARTED (Focus is persons a very high risk of exposure)
  - Critical Infrastructure workforce
    - Healthcare workers
    - First responders
    - COVID-19 vaccinators
  - Persons at increased risk of COVID-19 illness.
    - Long term care
- Who will be providing the vaccinations during Phase 1A?
  - Hospitals
  - Long term care facilities
  - Pharmacies
  - Federally Qualified Health Centers

20

## State of the City: COVID19 Stamford Department of Health

- Vaccine Distribution
  - Phase 1-Limited supply of COVID-19 vaccine available
    - Phase 1A Now
    - Phase 1B Late January or February ???
      - Critical Workers & Teaching Staff
      - Adults over 65 and High Risk Individuals under 65
  - Phase 2-Large number of vaccine doses available
  - Phase 3-Sufficient supply of vaccine doses for entire population

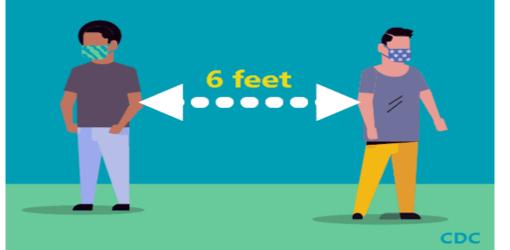

TO THE COLUMN THE COLU

- We will all need to continue our mitigation measures even if vaccinated
  - Wear a mask
  - Wash your hands frequently
  - Social distance
  - Get tested
