#### **Introduction and Certification**

This report presents the results of the June 30, 2016 GASB 67 and GASB 68 Disclosure for the Custodians and Mechanics Pension Trust Fund of the City of Stamford (the Plan). The report is intended to satisfy the requirements of both GASB 67 and GASB 68. This report may not be appropriate for any other purpose.

The report has been performed in accordance with generally accepted actuarial principles and practices. It is intended to comply with the Actuarial Standards Board Standards of Practice.

I certify that the actuarial assumptions and methods that were selected by me and represent my best estimate of anticipated actuarial experience under the Plan.

In preparing this disclosure report, I have relied on employee data provided by the Plan Sponsor, and on asset and contribution information provided by the Plan Sponsor or Trustee. I have audited neither the employee data nor the financial information, although I have reviewed them for reasonableness.

The results in this disclosure report are based on the Plan as summarized in the Summary of Plan Provisions section of this report and the actuarial methods and assumptions detailed in the Description of Actuarial Methods and Procedures and Description of Actuarial Assumptions sections of this report.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to factors such as, but not limited to, the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of this report, an analysis of the potential range of such future measurements has not been performed.

I have no relationship with the employer or the Plan that would impair, or appear to impair, my objectivity in performing the work presented in this report. I am a member of the American Academy of Actuaries and meet its Qualification Standards to render the actuarial opinion contained herein.

Evan W. Woollacott, Jr., FCA, MAAA, EA

Money-Weighted Rate of Return -3.37%

## Schedule of Investment Returns Last 3 Fiscal Years

|   | 2016   | 2015  | 2014   |
|---|--------|-------|--------|
| Annual money-weighted rate of return, net of investment expense | -3.37% | 0.73% | 16.34% |

|   | 2016             | 2015             | 2014             |
|---|------------------|------------------|------------------|
|   |                  |                  |                  |
| Actuarially Determined Employer Contribution (ADEC)       | \$<br>1,840,000  | \$<br>1,669,000  | \$<br>1,584,000  |
| Contributions in relation to the ADEC                     | <br>1,872,461    | 1,669,000        | <br>1,584,000    |
| Contribution deficiency (excess)                          | \$<br>(32,461)   | \$<br>           | \$<br>-          |
| Covered-employee payroll                                  | \$<br>20,527,753 | \$<br>19,929,857 | \$<br>19,177,570 |
| Contributions as a percentage of covered-employee payroll | 9.12%            | 8.37%            | 8.26%            |

#### **Discount Rate Calculation**

The long-term expected rate of return on investments may be used to discount liabilities to the extent that the plan's fiduciary net position and future contributions are projected to be sufficient to cover expected benefit payments and administrative expenses for current plan members. Projections of the plan's fiduciary net position incorporate all cash flows for contributions from the employer and employee and administrative expenses. Professional judgment should be applied to the projections of contributions in circumstances where (a) contributions amounts are established by statute or contract or (b) a formal written policy exists. Consideration should also be given to the most recent five-year contribution history as key indicators of future contributions. It should not include cash flows for future plan members.

If the amount of the plan's fiduciary net position is projected to be greater than or equal to the benefit payments and administrative expenses made in that period, the actuarial present value of payments should be discounted using the long-term expected rate of return on those investments. A 20-year, high quality (AA/Aa or higher), tax-exempt municipal bond yield or index rate must be used to discount benefit payments for periods where the fiduciary net position is not projected to cover expected benefit payments and administrative expenses.

Plans that are projected to have sufficient fiduciary net position indefinitely will use the long-term expected return on investments to determine liabilities but will have to substantiate their projected solvency.

GASB permits alternative methods to evaluate the sufficiency of the plan's net fiduciary position. Based on the plan's current net pension liability and current contribution policy, the plan's projected fiduciary net position will be sufficient to cover projected benefit payments and administrative expenses indefinitely. Therefore, since the fund is not projected to run out of money, we have used the 7.5% interest rate assumption to discount plan liabilities.

## **Target Allocation and Expected Rate of Return**

## Actuarial Valuation as of July 1, 2015

| Asset Class                       | Target<br>Allocation | Long-Term Expected Real Rate of Return* | Weighting |
|-----------------------------------|----------------------|---|-----------|
| Domestic Fixed Income             | 15.00%               | 2.00%                                   | 0.30%     |
| Domestic Equity                   | 30.00%               | 5.25%                                   | 1.58%     |
| International Equity              | 20.00%               | 5.50%                                   | 1.10%     |
| Asset Allocation                  | 35.00%               | 3.84%                                   | 1.34%     |
|                                   | 100.00%              |   | 4.32%     |
| Long-Term Inflation Expectation   |                      |   | 3.00%     |
| Long-Term Expected Nominal Return |                      |   | 7.32%     |

<sup>\*</sup>Long-Term Returns are provided by HHIA and FIA. The returns are geometric means.

The long-term expected rate of return on pension plan investments was determined using a building block method in which best-estimate ranges of expected future real rates of return are developed. Best estimates of the real rates of return for each major asset class are included in the pension plan's target asset allocation.

The information above is based on geometric means and does not reflect additional returns through investment selection, asset allocation and rebalancing. The results support a rate between 7.25% and 7.75%. An expected rate of return of 7.5% was used for the July 1, 2015 Actuarial Valuation.

# Pension Expense and Deferred Outflows and Inflows of Resources Related to Pensions

For the fiscal year ended June 30, 2016, the recognized pension expense is \$4,395,384. As of June 30, 2016, deferred outflows and inflows of resources related to pensions are reported as follows:

|  | Deferred<br>Outflows of |           |    | Deferred<br>Inflows of |  |  |
|--|-------------------------|-----------|----|------------------------|--|--|
|  | Resources               |           |    | Resources              |  |  |
| Differences between expected and actual experience                               |                         |           | \$ | (1,748,672)            |  |  |
| Changes of assumptions   | \$                      | 1,884,134 |    |                        |  |  |
| Net difference between projected and actual earnings on pension plan investments |                         | 7,418,090 |    |                        |  |  |
| Total  | \$                      | 9,302,224 | \$ | (1,748,672)            |  |  |

Amounts reported as deferred outflows and inflows of resources related to pensions will be recognized in the pension expense as follows:

| Year Ended June 30: |    |           |  |  |  |  |  |  |  |
|---------------------|----|-----------|--|--|--|--|--|--|--|
| 2017                | \$ | 2,060,358 |  |  |  |  |  |  |  |
| 2018                |    | 2,060,358 |  |  |  |  |  |  |  |
| 2019                |    | 2,060,358 |  |  |  |  |  |  |  |
| 2020                |    | 1,266,828 |  |  |  |  |  |  |  |
| 2021                |    | 7,453     |  |  |  |  |  |  |  |
| Thereafter          |    | 98,197    |  |  |  |  |  |  |  |

# Deferred Outflows and Inflows of Resources from Differences between Expected and Actual Experience

| Inactive plan members or beneficiaries currently receiving benefits | 147                  |
| Inactive plan members entitled to but not yet receiving benefits    | 20                   |
| Active plan members   | 527                  |
| Total members   | 694                  |

### **Description of Significant Changes Prior to Year End**

There were no significant plan changes since the last published valuation.

#### **DROP Balances**

Currently, there is no Deferred Retirement Option Plan (DROP). Therefore, the DROP balances are \$0.

#### **Valuation Date and Roll Forward Process**

The Plan Sponsor uses the July 1, 2014 Actuarial Valuation to calculate the ADEC for fiscal 2016.

The July 1, 2014 Actuarial Valuation was used to project the July 1, 2015 Total Pension Liability (TPL). The July 1, 2015 TPL was increased by service cost and interest and decreased by benefit payments to estimate the TPL as of June 30, 2016. The TPL as of June 30, 2016 was also adjusted to reflect any material plan changes after the valuation.

## **Funding Policy**

The Plan Sponsor uses the Entry Age Normal Actuarial Cost Method to calculate the plan liabilities. The Funding Policy has two parts.

- 1. Normal Cost
- 2. Amortization of the Unfunded Actuarial Liability (UAL)

Each year the Plan Sponsor pays the Normal Cost plus an amortization of the plan's UAL. For the July 1, 2015 Actuarial Valuation, an open amortization period of 15 years was used.

### **Assumption Selection**

The selections of all assumptions used in determining the total pension liability were made in conformity with Actuarial Standards of Practice issued by the Actuarial Standards Board.

The actuarial assumptions used in the valuation were based on standard tables modified for certain plan features such as eligibility for full and early retirement where applicable and input from the plan sponsor. A full actuarial experience study has not been completed.

## **Description of Actuarial Methods**

#### **Asset Valuation Method - Valuation**

The Actuarial Value of Assets used in the development of the Annual Recommended Contribution is designed to smooth out fluctuations in the market value. An Expected Actuarial Value of Assets is determined based on the prior year's Actuarial Value of Assets and the assumed interest rate equal to the valuation interest rate. The Actuarial Value of Assets is equal to the Expected Actuarial Asset Value plus 20% of the difference between the Market Value and the Expected Value. The Actuarial Value of Assets is limited to a minimum of 70% or a maximum of 130% of the Market Value.

#### Asset Valuation Method – GASB 67/68

As required by GASB 67/68, the market value of assets was used.

#### **Actuarial Cost Method**

Cost method for determining the calculating GASB liability: Entry Age Normal Actuarial Cost Method (level percentage of salary).

Cost method for determining the ADEC: Projected Unit Credit Cost Method.

The Ongoing Annual Cost equals the total present value for all participants of the benefit accruing during the coming year, increased to reflect salaries projected to the assumed retirement date.

The Accrued Liability equals the present value of all benefits accrued to date, increased to reflect salaries for all active participants. The total Accrued Liability is reduced by plan assets to develop the Unfunded Accrued Liability.

The cost of amortizing the Unfunded Accrued Liability constitutes a portion of the Actuarially Determined Contribution.

The total Actuarially Determined Contribution equals the Ongoing Annual Cost, further increased by any positive amortization of the Unfunded Accrued Liability. The amortization period is 15 years.

## **Description of Actuarial Assumptions**

|  | Year Ending<br>June 30, 2016 | Year Ending<br>June 30, 2015 |
|--|------------------------------|------------------------------|
| <b>Investment rate of return</b> (net of investment-related and administrative expenses) | 7.50%                        | 7.625%                       |
| Rate of compensation increase (including inflation)                                      | Graded Scale                 | Graded Scale                 |

#### Inflation

3.0%.

This assumption is based on long term (1926-2013) historical inflation numbers. While near term averages have been lower, we do not believe this trend will continue indefinitely and expect that there will be a reversion to the long term average.

#### Mortality

RP-2000 Mortality Table with separate male and female rates, with blue collar adjustment, combined table for non-annuitants and annuitants, projected to the valuation date with Scale AA.

#### **Mortality Improvement**

Projected to date of decrement using Scale AA (generational mortality).

We have selected a mortality table commonly used by public pension systems (such as the State of Connecticut). The plan does not have sufficiently credible data on which to perform a mortality experience study.

#### **Salary Scale**

Based on age. Sample rates shown below.

| Age | Rate  |
|-----|-------|
| 20  | 6.50% |
| 25  | 6.50% |
| 30  | 5.85% |
| 35  | 5.20% |
| 40  | 4.55% |
| 45  | 3.90% |
| 50  | 3.25% |
| 55+ | 3.00% |

The assumption is based on input from the plan sponsor regarding future expectations, as well as knowledge that younger employees generally earn higher annual percentage increases than older employees.

#### Retirement

Assumed annual rates of retirement after the completion of 10 years of service are as follows:

| Age   | Retirement Rate |  |
|-------|-----------------|--|
| 60    | 20%             |  |
| 61    | 5%              |  |
| 62-69 | 20%             |  |
| 70    | 100%            |  |

An additional 50% probability of retirement is added upon completion of 25 years of service.

#### Turnover

The following annual rates of turnover are assumed:

| Age | Probability |
|-----|-------------|
| 20  | 5.44%       |
| 25  | 4.89%       |
| 30  | 3.70%       |
| 35  | 2.35%       |
| 40  | 1.13%       |
| 45  | 0.00%       |
| 50  | 0.00%       |
| 55  | 0.00%       |
| 60  | 0.00%       |

#### Disability

The following annual rates of disability are assumed:

| Age | Probability |
|-----|-------------|
| 20  | .05%        |
| 25  | .05%        |
| 30  | .05%        |
| 35  | .06%        |
| 40  | .09%        |
| 45  | .18%        |
| 50  | .40%        |
| 55  | .85%        |
| 60  | .00%        |

The actuarial assumptions in regards to rates of decrement shown above are based on standard tables modified for certain plan features such as eligibility for full and early retirement where applicable and input from the plan sponsor.

#### **Deaths**

For purposes of valuing the plan's pre-retirement death benefit, we assume all deaths are non-service related.

#### **Payroll Growth**

3%, only used to project normal cost to the next year.

#### Survivorship

70% of employees assumed to be married, with wives 4 years younger than husbands.

#### **Expenses**

The normal cost includes a load for expected administrative expenses. Expenses are estimated based on actual amounts for the two prior years.

#### **Sick Bank**

50% of retirees are assumed to elect an annuity from the fund and 50% of retirees are assumed to elect a lump sum paid from the operating budget.

#### **Medicare Part B Reimbursement**

3% increase assumption each year.

## **Summary of Plan Provisions**

#### **Pension Earnings**

Salary in Final Year of Employment.

#### **Normal Retirement**

Eligibility: The earlier of 1) age 60 with 10 years of service, or 2) 25 years of service.

Benefit: Educational Assistants and Security Workers: 1.5% of pension earnings per year of service to a

maximum of 33 years.

Custodians: 2.25% of pension earnings times year of service to a maximum of 33 years.

#### **Limits on Annual Benefit**

Maximum: None.

Minimum: None.

#### **Disability - Non-Service Connected**

Service Requirement: 10 years of service.

Benefit: 50% of pension earnings if less than 25 years of service. Accrued retirement benefit if more than 25

years of service.

#### **Disability – Service Connected:**

Service Requirement: None.

Benefit: 50% of pension earnings.

#### Pre-Retirement Death Benefit - Non Service Connected

Service Requirement: None.

Benefit: Return of contributions if less than 10 years of service. 50% of pension earnings with 10 years of

service.

#### Pre-Retirement Death Benefit - Service Connected

Service Requirement: None.

Benefit: 50% of pension earnings.

#### **Post-Retirement Spouse's Benefit**

100% of pension retiree was receiving.

#### **Post-Retirement Death Benefit**

Lump sum, excess of accumulated contributions over benefits paid to member or survivors (if not eligible for spouse's benefit).

#### **Vesting in Accrued Benefit**

Eligibility: 10 years of service.

Benefit: Accrued retirement benefit.

#### **Termination Benefit**

Accumulated contributions as lump sum, if not vested.

#### **Employee Contributions**

5% of salary; no contributions for those with 33 or more years of service (7% for Custodians with a 33 year maximum).

#### **Additional Retirement Benefits**

Employees can trade in up to 125 days of sick leave for additional pension credit. Each 25 days grants an additional 1.5% of salary up to a maximum of 7.5%.

Educational Assistants and Security Workers are not eligible for this additional retirement benefit.
